

My laptop broke down a week ago and my desktop is a bit old with only 4gb of ram as shown below so I worked with my friend Mario Sherif as a team to finish this project.

The screenshot shows the Windows 10 'System' settings window. The title bar reads 'System' with standard window controls. The breadcrumb navigation shows 'Control Panel > System and Security > System'. On the left, a sidebar lists 'Control Panel Home', 'Device Manager', 'Remote settings', 'System protection', and 'Advanced system settings'. The main content area is titled 'View basic information about your computer' and is divided into several sections:

- Windows edition:** Displays 'Windows 10 Pro' and the copyright notice '© 2017 Microsoft Corporation. All rights reserved.' A large 'Windows 10' logo is on the right.
- System:** A table of hardware specifications:

Processor:	Intel(R) Core(TM) i5-4590 CPU @ 3.30GHz 3.30 GHz
Installed memory (RAM):	4.00 GB
System type:	64-bit Operating System, x64-based processor
Pen and Touch:	No Pen or Touch Input is available for this Display
- Computer name, domain, and workgroup settings:** A table showing:

Computer name:	Andrew-PC	Change settings
Full computer name:	Andrew-PC	
Computer description:		
Workgroup:	WORKGROUP	
- Windows activation:** Shows 'Windows is activated' with a link to 'Read the Microsoft Software License Terms' and the 'Product ID: 00331-10000-00001-AA838'. A 'Change product key' link is also present.

At the bottom, there is a 'See also' section with a link to 'Security and Maintenance'. The taskbar at the very bottom shows various application icons and the system tray with the date and time '6:25 PM 10/23/2020'.
